

Controls and compliance checklist

Controls assessment checklist

Yes	No	Control
☐	☒	Least Privilege
☐	☒	Disaster recovery plans
☐	☒	Password policies
☐	☒	Separation of duties
☒	☐	Firewall
☐	☒	Intrusion detection system (IDS)
☐	☒	Backups
☒	☐	Antivirus software
☐	☒	Manual monitoring, maintenance, and intervention for legacy systems
☐	☒	Encryption
☐	☒	Password management system
☒	☐	Locks (offices, storefront, warehouse)
☒	☐	Closed-circuit television (CCTV) surveillance
☒	☐	Fire detection/prevention (fire alarm, sprinkler system, etc.)

Compliance checklist

Payment Card Industry Data Security Standard (PCI DSS)

Yes	No	Best practice
☐	☒	Only authorized users have access to customers' credit card information.
☐	☒	Credit card information is stored, accepted, processed, and transmitted internally, in a secure environment.
☐	☒	Implement data encryption procedures to better secure credit card transaction touchpoints and data.
☐	☒	Adopt secure password management policies.

General Data Protection Regulation (GDPR)

Yes	No	Best practice
☐	☒	E.U. customers' data is kept private/secured.
☒	☐	There is a plan in place to notify E.U. customers within 72 hours if their data is compromised/there is a breach.
☐	☒	Ensure data is properly classified and inventoried.
☒	☐	Enforce privacy policies, procedures, and processes to properly document and maintain data.

System and Organizations Controls (SOC type 1, SOC type 2)

Yes	No	Best practice
☐	☒	User access policies are established.
☐	☒	Sensitive data (PII/SPII) is confidential/private.
☒	☐	Data integrity ensures the data is consistent, complete, accurate, and has been validated.
☒	☐	Data is available to individuals authorized to access it.

Security Recommendations for IT Management

- To hit our GDPR and PCI DSS compliance goals, we need to start encrypting all customer credit card info and sensitive data (PII/SPII) right away, both where it's stored and when it's being sent.
- Since everyone currently has access to sensitive files, we need to apply the principle of least privilege and separate duties across the board. Getting a central password manager in place is a quick win to solve the weak password problem and take some pressure off the staff.
- Setting up an IDS on the inside network is a must. That way, we can catch weird or shady traffic early instead of reacting after the damage is done.
- We are completely missing a Disaster Recovery Plan. We really need a solid routine for backing up the important stuff, so if a server crashes tomorrow, we aren't left scrambling.
